**Modificato il Look & Feel di xWikiApice**

L'idea di fondo è la stessa, ma come si può notare, è stato ridisegnata la sezione superiore con nuovi header, più leggeri ed aggiornati.

Inoltre è stata introdotta una nuova barra di navigazione attiva, per spostarsi tra i principali spazi del portale.

Come sempre contiamo sul vostro aiuto per individuare eventuali malfunzionamenti.

grazie

**First blog post**

This is your wiki's blog first post. Its goal is to provide a short description of your blog's main features.

- You can create new blog posts through the input field located on your Blog's homepage. The status of a blog post may be any one of the following:
  - *Unpublished*: your post is still a draft. It can be seen by its creator and by administrators. Once you have clicked publish, you cannot unpublish a post. However, you can choose to hide it.
  - *Published*: your post can be read by every user that has access to your blog.
  - *Published & hidden*: your post is published but only its creator and admins can see it. This is useful if you need to make modifications on a post that has already been published by mistake.

- Every blog article can be tagged and/or categorized:
  - You will be able to browse posts by category using the panel located on the left of the page
  - You can create new categories and subcategories when creating a new post
  - The use of tags allows your article to be found by browsing your wiki's tags, along with any other wiki document

- Blog-specific panels are available on the left of your blog page:
• The **recent posts** lists the most recent entries to any visitor of the blog
• The **unpublished panel** lists the blog posts you created, but didn't yet publish
• The **categories panel** lets you browse blog posts listed by category and subcategory
• The **archive panel** lets you browse blog posts by publication date

Happy blogging!
